

10' LAUNDRY CONTAINER

This fully electric field laundry, installed in an ISO 10' container, is totally equipped to offer a service of up to 39 kg/hour. It has six professional washing machines and six tumble-dryers.

The unit is air-transportable and has a system for treating and reusing water. The machines operate separately so that in the event of one failing the rest of modules remain operative and only total output is affected.

All the laundry components are stored inside for transport.

A tent can be adjoined for sorting, folding or ironing clothes. To equip the ironing area another 10' container is required.
